Ambuj Kumar Chaubey

Associate Data Engineer (0.5 Year)

|| Profile Summary

- Associate Data Engineer at R Systems International with hands-on experience in SQL, Python, Data Analytics, Cloud computing, ML and BI tools such as Power BI and Tableau working with real-world business and operational datasets and contributing to reporting and migration accelerators.
- Contributing to building accelerators for migrating legacy reports to modern BI platforms such as Power BI, improving the efficiency of report conversion.
- Experience in preparing datasets, applying machine learning algorithms and evaluating model performance for classification, clustering, and predictive analytics.
- Developed Tableau, Power BI and Excel dashboards to visualize trends and key business metrics.
- Strong understanding of computer science fundamentals including data structures, algorithms, operating systems, cloud computing, and computer networks.
- Comfortable working in delivery-driven project environments and collaborating with cross-functional teams.

|| Education & Certifications

- B.Tech, Lovely Professional University, 7.71
- Senior Secondary, Himalayan Internation School, 79%
- Higher Secondary, DAV Public School, 84%
- Cloud Computing: NPTEL Online Certification
- Data Science: Oracle Cloud Infrastructure 2025 Certified Data Science Professional

|| Technical Skills

Programming Language:	Python, Java
DBMS:	PostgreSQL, MySQL
Cloud/Devops:	AWS, Github, Docker, Kubernetes
BI & Data Tools:	Tableau, Power BI, Excel
Others:	Prompt Engineering, Data Analysis

|| Work Experience

R Systems

Role: Associate Data Engineer **Duration:** 10/2025 to Present

1. Currently working on migrating legacy Oracle-based reports to Power BI dashboards to support modern BI reporting and better data visualization.

2. Involving in the migration of SSRS reports to Form-based layouts in Infor SyteLine v10, adapting report structures to the new reporting framework.

3. Preparing datasets and optimizing SQL queries to ensure accurate data extraction and efficient report generation.

4. Assisting in developing automation accelerators for report conversion to simplify and speed up the migration of multiple legacy reports.

Tech Stack: Python, SQL, Power BI, Oracle, SSRS, Infor SyteLine

Academic Project

Project: MLOps: Multi-Disease Prediction System Using Machine Learning
Description: Developed an end-to-end machine learning system to predict multiple diseases including Diabetes, Heart Disease, and Parkinson's using machine learning models. Implemented CI/CD practices to automate model deployment and ensure consistent application delivery.
Responsibilities:

- Developed machine learning models for disease prediction using structured healthcare datasets.
- Built an automated CI/CD pipeline to streamline model development, testing, and deployment.
- Containerized the application using Docker to ensure portability and consistent runtime environments.
- Designed a web interface to allow users to input medical data and receive prediction results.
- Implemented data preprocessing and feature engineering to improve model performance.

Tech Stack: Python, Streamlit, Docker, Kubernetes, Pandas, Scikit-learn, GitHub

Project: Sentiment Analysis on Social media Contents
Description: Developed a machine learning-based system to analyze social media text and classify user sentiment into positive, negative, and neutral categories to understand public opinion trends.
Responsibilities:

- Collected and preprocessed social media text data for sentiment analysis.
- Implemented machine learning models such as Naïve Bayes, SVM, and Random Forest for sentiment classification.
- Performed text preprocessing techniques including tokenization, stopword removal, and feature extraction.
- Designed a web interface to allow users to input medical data and receive prediction results.
- Evaluated model performance using accuracy and other metrics to improve prediction quality.

Tech Stack: Python, Python, Pandas, NumPy, NLTK, SpaCy, Scikit-learn

Project: Air Quality Data Visualization Dashboard (India)
Description: Developed an interactive dashboard to analyze and visualize air quality data across different cities in India, helping identify pollution trends and environmental health indicators
Responsibilities:

- Collected and analyzed air quality datasets to identify pollution patterns and trends.
- Designed interactive dashboards to visualize key environmental indicators.
- Created geospatial maps and time-series charts to highlight pollution hotspots and trends over time.
- Designed a web interface to allow users to input medical data and receive prediction results.
- Enabled data-driven insights through clear and user-friendly visualizations.

Tech Stack: Tableau, Data Analysis, Data Visualization
